The bathroom

A JOURNEY

The bathroom has come a long way. Once a humble room devised for functionality, it has experienced a renaissance over the last few years. New age bathrooms are a reflection of one’s persona driven by today’s innovations in design and technology.

This change in the bathroom’s utility has also changed the aesthetics of the space. The bathroom has come to represent personality as much as function. Technology has also found a firm footing with the introduction of products like Ambient Rain Spas and Intelligent Toilets. Today’s bathroom is as much about sensorial delight as it is about function.

This is where at Hindware have unique expertise to offer solutions that marry technology with aesthetics to create spaces that are truly divine and a true reflection of you.

Season’s trend

Neo Rococo

A TESTAMENT TO YOU

The world around you is ever changing. With every passing era, you witness a layering of influences that weave a new thread between habit and habitat to give birth to a new mechanism. That give birth to a new trend.

You realise that in this age, paradox is passé. You marvel at technical expertise while celebrating the past. You revel in minimalist stroke with the same ease as the non-stop clutter of the competitive milieu. This is the era of embracing opposites to create something totally new.

Millennials today are modern and progressive in thought yet rooted, taking inspiration from the past. This can be seen in your choices of life-ranging from the clothes you wear, the music you listen to, the home décor you create. to the bathrooms you aspire for. From polka dots to bell bottom jeans, from big framed shades to curly hair, everything is making a comeback. Consistently studying these volatile trends led to the birth of our inspiration Neo-Rococo, a timeless trend.

Seeded in 2016, and going on to 2017, we are witnessing the revival of the classics era. All around you, the Neo-Rococo period of the 18th Century is coming back. One decade in history is giving birth to a wondrous marriage of contemporary technology with timeless grace. This is your inspiration. And now it is ours as well with designs that are playful, yet light, Decorative, yet subtle, Vivacious, yet intimate.

Within these pages you will find a showcase of everyday musings transformed into exquisite interior thematics to mirror your own quest for perfection.

Expert Advice

DEAL WITH WATER FLOW ISSUES IN THE SHOWER THE RIGHT WAY
Water flow is a common issue faced by consumers buying on higher floors. Ideally, the distance between shower area and overhead tank should be 30 ft to receive proper water flow. In case pressure in shower units can help control water pressure issues. For all single flow, multi flow and LED showers, recommended pressure is below 3 Bar and for big showers, 400 mm onwards recommended pressure is 5 Bar to receive adequate water flow.

All the above depend upon the following parameters:
• Size of connecting pipe
• Number of shoes
• Distribution from bigger size pipe to small ones
• Height of Building
• Number of Disturbances

Hardware has many types of flow in showers like Rain, Massage, Mist, combination of these etc.

FOR A PLEASANT EXPERIENCE IN BATHROOMS, RIGHT INSTALLATION IS A MUST
Everyone wants a modern and contemporary basin and water closet. It is very important to ensure correct height of installing an over the counter basin and a wall mounted water closet for a smooth experience. 32 inches is the height at which an over the counter basin should be installed. If the basin is up with a tap hole, then normal basin mixers are recommended. For basins without tap holes, tall basin mixers or wall mounted are recommended. Ideal height of 400mm from the floor is suitable for installing a wall hung water closet for comfortable usage. If tightly mounted, you can experience back or leg pain and children will also find it difficult to use. If the height is too low, older people will find it highly inconvenient and it’s almost like squatting on a pan.

KEEPING THE WC CLEAN WHICH CARRY GERMS AND BACTERIA IS NO LONGER A DIFFICULT TASK – 100% CLEAN 100% RINNWARE ECO-FRIENDLY WC
Whether you are a solo user of your bathroom or have a loving family to accommodate, hygiene in the bathroom is a factor you cannot hit too hard. In a standard water closet with an rim, it is almost impossible to properly clean under the rim. The tank brush or any cleaning agent cannot reach or cover every aspect of the surface, which allows germs to hide. Innovation unrivaled – Rinnware’s Rinna series of water closets recommended by UAPM – Indian Medical Academy of Preventive health. Here there is no rim, a quick wipe over with a damp cloth ensures sparkling results every time. You shouldn’t use less cleaning products as there is no need to squat under the rim to get rid of the germs that are unseen. The outside of the toilet bowl is also easy to clean too as there no awkward places for dust to gather.

As such, a rimless toilet also needs a special flush system. A conventional toilet has a large number of holes, under the rim, or a narrow slit running its length to keep water from splashing out. A rimless leaves a light foam area of the bowl unwashed. In contrast, a rimless WC has multiple flushing entries along the edge of the pan allowing the entire surface area of the pan to be cleaned. However, this doesn’t mean you’ll be using more water as the water guzzling one is powerful and more direct, thereby ensuring superior performance. And, with exceptional flushing performance every time, it is a product which helps save water too. A must have for your homes.

WHILE REMODELING A BATHROOM FROM NORMAL SIT TO WALL MOUNT WC
• It is essential to check that the drainage pipe should be in the wall not on the floor.
• Also the wall thickness for the concealed system is recommended to be 9 inches.

LEAKAGE IN FAUCETS IS A COMMON PROBLEM IN HOUSEHOLDS
Even a small faucet leak can waste 3 gallons of water a day. Fix that leak! At Hindware, in assembled each faucet is subjected hydrostatically at the pressures of 0.7 kg/cm². Water tightness at 16 kg/cm² and all types of concealed faucets are systematically tested at a pressure of 5.7 kg/cm² and no bubble is permitted.

LET’S SAVE WATER WITH ECO-FRIENDLY PRODUCTS
Sustainability now lies at the core of bathroom design. For large families, water consumption is always high. To save water and reduce your water bills, get eco-friendly products for your bathroom
a) Water Star rated products certified by EPA
b) Products with DfRCL certification for their reduced water consumption during full flush/flush (263 liter)
c) Dual flush (Clean Extra) with 3/6 & 2/4 litres flushing, Dual flush toilets use up to 67% less water than conventional toilets
b) Single flush with 1.5 litres flushing (name) Water saving Technology
d) Low flow - Shower Heads
  • 2.24 litres water flushing saves 33 % water
g) 1.5 litres water flushing saves 75% water

Hindware water saving products can save up to 65K litres of water per household which is good enough to plant 5 trees every year,
Expert Advice

DEAL WITH WATER FLOW ISSUES IN THE SHOWER THE RIGHT WAY

Water flow is a common issue faced by consumers living on higher floors. Ideally, distances between shower areas and overhead tanks should be 30 ft to receive proper water flow. Bar pressure in shower units can help control water pressure issues. For a single-flow, multi-flow, and LED showers, recommended pressure is below 3 Bar and for big showers, 400 mm upwards – recommended pressure is 3 Bar to receive adequate water flow.

All the above depend on the following parameters:

- Size of connecting pipe
